

Plant Anatomy (for Artists and Non-Scientists)

A course merging the art and science of plant anatomy to showcase the beauty of nature

This course will focus on showing the amazing beauty of the internal structure of plants. Participants will be provided with non-technical and simple explanations of plant cells, tissues and organs so as to easily understand how plants work. Participants will have the opportunity to make their own slides, use stains and learn basic techniques with which to examine plants at a finer level.

The course will merge art and science, with hands-on activities and time for observation and exploration. It will be of interest to those in the field of art and design who seek artistic inspiration from plants and anyone who wants to find out what plants look like under a microscope. Prior knowledge of plant anatomy or ability to draw is not required.

Date: Sunday 4 May 2014

Cost: \$150 (discounts available for QUT staff, students and alumni)

Cost inclusions: Training and course materials

Location: QUT Gardens Point Campus, 2 George St, Brisbane

Course requirements: wear covered shoes, bring lunch and snacks (limited options available for purchase on campus)
